

The Sound That Will *Move* You

SubZero

The Ultimate Competitor

These monster bass drivers rule in speed, sound quality, and SPL. Armed with a U.S. made massive 3.25" aluminum voice coil former with a flat wire wrapped edge wound style, it easily uses 2000 Watts RMS. With a 3" tall winding on the 10" and 12" Subzero models and a massive 3.5" winding height on the 15", each of these has an astounding 4 inches of peak to peak travel, with the winding in the magnetic gap at all points of travel.

The Subzero also boasts its TCT (Turbine Cooled Transducer) coil and pole cooling technology, plus the PSP Terminal block that allows stereo and mono impedance changes just by flipping fuses. You can now have the perfect combination of looks, performance, reliability, longevity, and ease of installation.

The Subzero line consists of three models: Subzero 10" (1500 Watts Max), Subzero 12" (2000-Watts Max) and Subzero 15" (2500-Watts Max).

Features:

- Military grade flat wire voice coil
- Massive excursion for high SPL
- Super wide edge surround
- Exclusive 8-gauge PSP terminals
