

PoE Multi-Zone Audio Solution With BTA-250 & IWS

CONNECTION FROM SOURCE

1. In this illustration, you can use the 3.5mm audio input to the IWS and send audio signal to all BTA-250 zones. The source can be a residential receiver or a commercial PA system.
2. As for the local BTA-250 zones, you can elect to listen to the IWS broadcast or use the local BTA-250 Bluetooth® or connect to the local BTA-250 with a 3.5mm audio input. The BTA-250 hierarchy is as follows:
 - a. 3.5mm hardwired to local BTA-250
 - b. Bluetooth® in local BTA-250
 - c. Broadcast from the IWS by Power over Ethernet (PoE)
3. An Android app can be used for Bluetooth® renaming of the BTA-250. https://downloadapk.net/ISSC%20Audio%20Widget_1

The IWS can be powered by a CP2425 power supply (sold separately) that can be plugged into the front or hardwired to the phoenix connector on the back of the unit.
